

Save money with SPM precut shims!

The line of shimming materials contains five different sizes, fitting almost any type of machine foot. The user can choose between solid stainless steel shims and laminated shims in either brass or stainless steel.

Solid shims in high grade stainless steel

Solid shims, individually marked with thickness, are available in each size. They come in packs of 10 per thickness from 0.025 mm to 3.00 mm, or in convenient boxes of selected thickness' per size. A selection of thickness' and sizes are available in refillable aluminium framed cases fitted with a compartmentalised high density foam insert.

Laminated shims and sheets

Laminated shims are available in each size in precut packs of 20, or uncut sheets, in both brass and stainless steel. Each shim has a thickness of 1.00 mm divided into 12 layers.

Laminated shims always fit - just peel off to the required thickness.
